

Boston O&P Wear Time Monitoring

Patient Name: _____

Athena ID: _____

Date: _____

Boston O&P has made scoliosis brace wear time monitoring our standard of care

Studies on brace wear show that when patients know they are being monitored and they receive a performance report, their adherence to the recommended hours of wear improves.

Brace monitoring gives all of us valuable information regarding a patient's ability to wear the brace for the recommended hours. When we see that patients are successful, we celebrate. If there are some difficulties, then we can have an honest conversation and develop strategies to help increase wear time. Everyone is working together so no one feels they have to overestimate wear time.

At each follow up visit, you will receive a comprehensive report showing actual wear time. The data gathered will be used to assist with patient care. Without disclosing any identifiable information, we may utilize the data to further demonstrate the positive impact of brace monitoring.

There is no additional charge for the iButton sensor. It is part of our commitment to help you succeed.

_____ I agree with Boston O&P's standard of care and understand that the iButton thermal sensor will be installed in the Boston Brace.

_____ I do not agree with Boston O&P's standard of care and do not want the iButton thermal sensor installed in the Boston Brace.
